

ÖVDALIAN TOOLBOX

Piotr Garbacz & Henrik Rosenkvist

In this document we provide words that can be juxtaposed to form sentences for questionnaires. Copy and paste! Note that most words in the lists appear in uninflected forms! We strongly recommend, however, that all participants in the workshop check inflection and orthography in Åkerberg (2004) or Steensland (2006) (both may be acquired from Ulum Dalska).

10. Comments

We have found that the font Lucida Grande works best when writing Övdalian.

Concerning inflection, choice of words etc, we have turned to the resources that are available (Åkerberg 2004, Nyström & Sapir 2005, Steensland 2006) – Övdalian as depicted in these works is however probably not representative for the current speakers, reflecting rather an Övdalian spoken in the mid 19th century. This is, we think, a caveat that cannot be circumvented.

² Note that the numerals 1–4 inflect for case and gender (at least in older Övdalian).
